Skin Booster Information

Skin boosters are injectables that improve skin texture, elasticity, hydration and overall appearance. Treatment involves injecting hyaluronic acid (HA)/ polynucleotides which is a soft, gel-like substance under the skin, which improves the skin's elasticity, firmness and radiance giving an overall skin quality.

Post Treatment:

Following treatment, results can be seen in a few days. Maximum treatment results can be seen after the full recommended course and can last up to 6-12 months depending on the skin booster used.

Aftercare advice:

- Avoid touching the treated area after the skin booster treatment, for at least six hours. Touching the area can introduce bacteria and irritate the skin, which can interfere with the healing process.
- Apply Ice Packs to reduce swelling and discomfort, for up to 20 minutes
- Avoid strenuous exercise for at least 24 hours after the treatment. Sweating can increase the risk of infection and interfere with the healing process.
- Use a gentle cleanser, fragrance-free to wash your face for the first few days after the treatment. Avoid using hot water and aggressive scrubbing, which can irritate the skin. Instead, use lukewarm water and gently pat your skin dry with a soft towel.
- Moisturise regularly as it helps to keep your skin hydrated and promotes healing. Apply a high-quality, fragrance-free moisturiser to your face at least twice a day, or as recommended by your aesthetician.
- Avoid Makeup for the first day after the skin booster treatment, avoid using makeup for at least the first day. Makeup can clog your pores and interfere with the healing process. If you must use makeup, choose a non-comedogenic product that is safe for sensitive skin.
- Avoid drinking alcohol and smoking for at least 24 hours after the treatment. Alcohol and smoking can interfere with the healing process and increase the risk of infection.
